

## **SILO CLEANING: We have Cleaned the TOUGHEST Silos!**

Cardox Global Services is the ONLY company in the world to provide a truly TOTAL approach in performing Silo Cleaning that puts us ahead of the competition. Our Silo Cleaning method involves specialised procedures which our professional team is fully trained and capable of performing the tasks efficiently, effectively and most of all, safely.

### **Bottom-up approach - Cardox System**

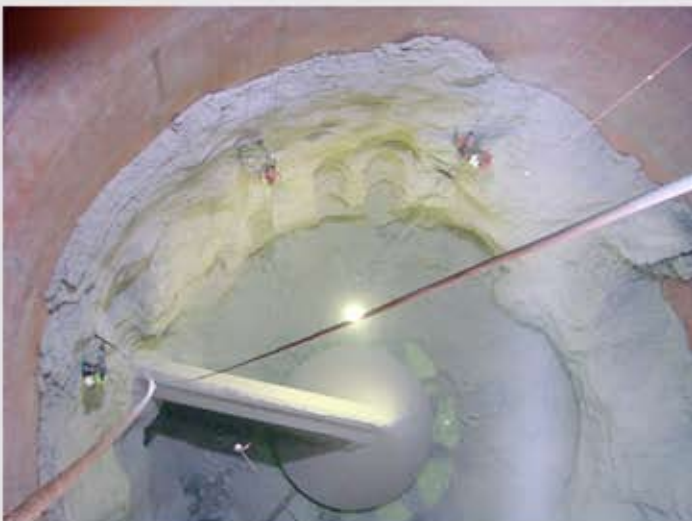

The Cardox System is used at the extraction area or flow gate to remove or break down any blockage that is preventing the loose material from flowing out of the silo.

### **Top-down approach - SiloWhip System**

The SiloWhip System is mounted on manholes located on the roof of the silo. The whip is lowered into the silo with a 180 degree rotational boom that extends to 7 meters. All movement inside the silo is remotely controlled from the roof.

### **Rope access approach - Our Highly Trained Specialist**

Our highly trained specialists are lowered into the silo by using only ropes to access the build-up located along the side walls of the silo. They are able to anchor themselves along the build-up to perform a drilling operation for Cardox tubes to be inserted & activated safely from outside the silo.

**Providing  
Expert  
Solutions  
Worldwide**
